PROFESSIONAL SUMMARY:

Motivated AI enthusiast and full-stack developer with expertise in web development and data science, actively solving DSA problems, and experienced in building scalable, data-driven applications using ML, NLP, and RAG.

EDUCATION:

- Bachelor's in computer application — 9.3/10 | 2023-26
- XII(CBSE)| New Era Public School, Patna — 88% |2022

EXPERIENCE:

Python Intern | Infosys springboard *(Nov 2025-Jan 2026)*

- Designed preprocessing pipelines for cleaning, normalization, and transformation of sensor and activity data.
- Implemented anomaly detection logic to flag irregular patterns in user health trends.
- Collaborated with senior developers to validate model outputs and improve reporting reliability.

OJT Trainee | CDAC — Applied AI & System Development *(Dec 2025- Feb 2026)*

- Worked on AI-powered audio intelligence systems in a structured development environment.
- Built pipelines involving feature extraction, speaker embeddings, and clustering workflows.
- Assisted in integrating models into backend services for automated processing.
- Strengthened understanding of scalable system design and optimization.

Data Analytics Intern | IBM CSRBox (Remote) *(Jul 2025 – Aug 2025)*

- Performed data cleaning, transformation, and exploratory analysis on real-world datasets.
- Assisted in generating visual summaries and reports for decision-making.

MERN Stack Intern | InternNexus, Patna *(May 2025 – Jun 2025)*

- Developed full-stack modules using MongoDB, Express, React, and Node.js.
- Implemented REST APIs, CRUD operations, and authentication flows.
- Collaborated in testing, debugging, and feature enhancements.

TECHNICAL SKILLS:

- **Web:** HTML, CSS, JavaScript
  Full-Stack: MongoDB, Express.js, React, Node.js
  Languages: C, Java, Python
  AI/ML: NLP basics, embeddings, clustering
  Cybersecurity: Ethical hacking fundamentals |**Tools:** Arduino, Linux, MS Office, Photoshop

PROJECTS:

FitPulse — Health Analytics & Anomaly Detection

- Built a fitness monitoring system to process activity and sensor data.
- Developed preprocessing workflows and applied anomaly detection to highlight abnormal trends.
  Tech: Python, ML, data processing.

Speaker Diarization & Time-Stamping

- Developed an audio intelligence pipeline to identify multiple speakers.
- Used embeddings and clustering to assign speaker labels with time intervals.
  Tech: Python, audio processing, ML.

MediCare — Role-Based Healthcare Dashboard (MERN)

- Implemented Admin, Doctor, and Patient modules with secure authentication.
- Enabled appointment scheduling, records handling, and reporting features.
  Tech: MongoDB, Express, React, Node.js.

Plant Disease Detection

- Built an image classification model to detect diseases from plant leaves.
- Supported early diagnosis through automated prediction.
  Tech: Python, ML/DL, computer vision.

Smart Home Security (IoT)

- Designed a PIR and GSM-based intrusion detection system.
- Triggered SMS alerts and visual indicators for threats.
  Tech: Arduino, Embedded C.

ACHIEVEMENTS:

Winner — TECH-CURE Hackathon (Patna Women's College) | Finalist — Eco-Hackathon (IIT BHU) | Participant — Idea Khumbh, Xest'24, Tech Fiesta'24

CERTIFICATIONS:

Full Stack Web Development & Artificial Intelligence — Pantech Solutions | Java — Geekster | Cybersecurity — NIELIT | Agentic AI — IBM SkillsBuild
